ABSTRACT

The present invention relates to a method for the external coating of a plastic part that surrounds the armature outlet of a sanitary outlet armature. The present invention also relates to an outlet part that surrounds the armature outlet of a sanitary outlet armature.

The characterizing feature of the present invention is that the outlet part is manufactured as a plastic part that bears on its outside, at least in a partial area, at least one layer of an adhesive film or hot-stamping film. The present invention enables an economical coating of a sanitary outlet part, this coating being distinguished by its long life span.
